

The following document is to outline the core tenets of ExecHQ's brand. Keep in mind that these questions are about The Exec Desk's brand overall, not fully specific to the initial pilot product.

BRAND MISSION

What is The Exec Desk's mission in the world? (to reiterate, the company overall, not the specific product) What drives everyone to get out of bed in the morning?

The Exec Desk exists because Managers, Directors, VPs, and SVPs who will define the next decade of organizational leadership are making the most consequential career decisions of their lives right now — without the intelligence resource those decisions actually require.

Every major economic system has built an intelligence layer. Financial markets have real-time data. Marketing has attribution. Enterprise has CRM. The executive career economy — where leadership positioning is built and lost, where transitions are made or missed, where organizational futures are decided — has never had this. It still operates on instinct, incomplete information, and point-in-time snapshots.

Every other resource they have access to — their employer, their coach, their mentor, their network, LinkedIn — has an audience. An agenda. A political dimension. None of it is truly theirs. The result is that the most important career decisions of their lives get made on instinct, on incomplete information, and in private conversations that can never be fully honest because someone is always listening.

The Exec Desk is built to change that. Not just for executives, but for professionals in fields where career building matters and private intelligence has never existed. The mission is to give every individual a private, intelligent resource that is accountable only to them — one that tells them the truth, holds their confidence, and helps them build deliberately toward wherever they are going.

What gets everyone out of bed is the knowledge that the executives making critical (and some less critical) decisions right now would make more informed choices, build more deliberately, and feel significantly less alone in their careers if they had access to what The Exec Desk is building, starting with ExecHQ. We are not addressing a small problem, but a major structural gap, especially in the age of AI.

AUDIENCE DEMOGRAPHIC

Who is ExecHQ speaking to? Younger or older? Tech-savvy vs not?

ExecHQ speaks to professionals in their mid-30s through mid-50s — the career window where the decisions being made right now are the ones that determine whether someone reaches the roles they aspire to. The primary sweet spot is roughly 35 to 50, which maps naturally to the Manager through SVP cohort. While many C-suite users might find value in ExecHQ, they tend

to skew older, 45 to 60, and tend to be in that stage of exploring what comes next rather than building toward a first senior role.

On tech-savviness: this audience are sophisticated users who carry smartphones everywhere, are accustomed to well-designed digital tools, and have zero tolerance for clunky, non-seamless experiences. They use LinkedIn daily. They consume news through apps. They are comfortable with AI tools — many of them use ChatGPT or Copilot in their work already. They are not tolerant of products with poor UX. A platform that feels unpolished in the first two minutes will lose them permanently.

The enterprise audience — CHROs, learning and talent development leaders — skews similarly in age, is highly sophisticated about HR technology, and evaluates platforms partly on how polished and credible they look before ever using them. The Deloitte partnership matters here as much for the credibility signal as for the distribution.

AUDIENCE PSYCHOGRAPHIC

What is the audience's mindset when interacting with the brand? Are they coming for answers at a stressed time? More relaxed? Both or neither?

What problem is ExecHQ resolving for them?

The mindset when interacting with ExecHQ is almost always some version of transition, urgency or anxiety. Not panic or crisis. But a persistent, low-grade awareness that something important is at stake and that they are not fully certain they are handling it correctly.

These are high-functioning, accomplished people. They are not coming to ExecHQ because they are failing. They are coming because they are succeeding and they know that success at this level requires more precise intelligence than they currently have. The Manager who is genuinely excellent at their job but has watched a peer get promoted ahead of them and cannot fully understand why. The VP who has been told they are "on the path" to SVP but has no honest picture of what that actually means or whether the path is real. The SVP who is questioning whether the company they are at is still the right vehicle for where they want to go. The exec who is looking for the spark to begin exploring an entrepreneurial direction. And the C-suite executive who is privately wondering what comes after this and has nowhere to think about it honestly, or doesn't know how to stand out from others at their level.

Their emotional state is more like a sustained sense of navigating something important without the right instruments or tools.. ExecHQ gives them the instruments that fit their specific need. The experience of using it well should feel like the moment you finally get honest, specific information after a long period of operating on assumption. Relief, clarity, and a renewed sense of agency.

The secondary psychographic is the executive who is genuinely stuck and knows it — the person who has lost the thread of where they are going and needs a private space to find it again.

A re-ignition of their journey or process. This user is vulnerable. The platform needs to hold that vulnerability with the same respect it holds ambition.

BRAND PROMISE

What promise does ExecHQ make to the audience listed above?

ExecHQ promises honesty and support **without an audience and without judgement.**

Everything else — the coaching, the intelligence, the opportunity matching, the venture readiness, the daily briefing — is built on that foundation. The platform can be honest with you because nobody else is watching. Your employer does not see it. Your network does not see it. Your mentor does not know you asked. Your executive coach isn't charging you for a session. The account belongs to you permanently, regardless of what happens to your career.

That honesty is specific, actionable, and built around where you are going — not where you are now, not where someone else thinks you should be. ExecHQ promises to show you exactly where you stand, tell you the truth about the gap between there and where you want to go, and give you the specific path to close it.

The brand promise, in one sentence: **Your career doesn't pause. Neither does ExecHQ — the private, honest resource that is there for every question, every inflection point, and every moment you need to think clearly about what comes next, with the tools and guidance to help navigate it.**

BRAND PILLARS

Create a prioritized list of 3-5 values that the company holds dear and a description to back up those words. Ideally there should be a single word that you wish to be known for and several that are ancillary.

What words describe what you hope ExecHQ will never be?

Candor.

This is the word The Exec Desk wants to be known for above all others. Candor means saying the difficult thing specifically, without softening it to the point of uselessness, because our users are capable of handling the truth. Every feature of ExecHQ is built around this. The Growth Advisor does not tell you what you want to hear. The Confidant feature handles the questions that require someone to be direct with you when no one else will.

Privacy.

Not as a legal compliance position but as a foundational design philosophy. Privacy is the condition that makes candor possible. Every architectural decision — no company name,

optional name field, personal email only, permanent account — flows from this. Privacy is not a feature. It is the reason the platform can do what it promises.

Specificity.

Generic advice is everywhere. ExecHQ is not in the generic advice business. Everything the platform does is calibrated to this specific person, their specific aspired role, their specific industry, their specific signal profile, and the specific opportunities available to them right now. This conference, this podcast, this press angle, this week. Specificity is what separates intelligence from information.

Continuity.

The platform remembers. Unlike a coaching session that starts mostly from scratch, unlike a LinkedIn profile that captures a moment in time, ExecHQ accumulates context and gets more specific and more accurate the longer someone uses it. The relationship compounds. Continuity is what makes everything else progressively more valuable.

Credibility.

The platform does not tell executives what to do. It gives them the intelligence to decide for themselves — clearly, specifically, and with a confidence that comes from actually understanding their situation. The goal is never dependency. The goal is an executive who makes better decisions because they finally have the honest picture they have always needed.

Words ExecHQ will never be: generic, arrogant, performative, public, gamified, judgmental.

TONE OF VOICE

How does ExecHQ speak to its audience? Are they a trusted authority or a peer? Stern or comforting? Etc.

ExecHQ speaks like a trusted advisor who has read everything about you and has no agenda except your success.

Not a coach who needs to justify their hourly rate. Not a mentor who filters their advice through their own career experience. Not a colleague who is also competing with you. A genuine confidant — someone who can be direct because they have nothing to gain from softening the truth, and who is supportive because they genuinely care about the outcome.

The tone is calm authority with human warmth. It does not hedge unnecessarily or pad responses with qualifications that dilute the message. It does not preach or moralize. It is not a peer — it knows more than a peer would — but it does not hold that knowledge over the user. It is an advisor who respects the intelligence and capability of the person they are talking to.

In practical terms: short sentences. Active voice. Specific examples rather than general principles. No corporate jargon. No empty encouragement. No "great question." Direct answers to direct questions, delivered with the tone of someone who is genuinely on your side.

COMPETITORS

Who else is doing something similar? What do they do well/poorly and how is ExecHQ different?

The honest answer is that no direct competitor exists yet — which is the opportunity and the challenge simultaneously.

The adjacent categories are executive coaching, LinkedIn and LinkedIn Premium, LinkedIn audit tools (IconAudit, LinkedInRank, and fifteen others), personal branding consultants, and content and exposure platforms like the C-Suite targeted platform I referenced earlier.

Executive coaching provides a valuable service, but it doesn't provide the comprehensive signal data, role-calibrated benchmarking, relevant content, specific opportunity matching, or availability outside scheduled sessions. It is expensive, slow, and has no measurement layer. It is also reliant on the coach being the right fit. ExecHQ does not replace the best coaching relationships — it gives both the coach and the executive better information to work from.

LinkedIn dominates professional visibility. It is currently the most important signal ExecHQ measures. But it is public by architecture, one-dimensional in what it measures, and structurally incapable of the private intelligence function. LinkedIn's business model requires visibility. ExecHQ's value proposition requires the opposite.

The LinkedIn audit tools are commoditizing rapidly and are all solving a narrower problem — how does your LinkedIn profile look to the outside world. ExecHQ asks a fundamentally different question: how does your full career presence actually stand relative to where you want to go, and what do you do about it privately.

The new C-Suite targeted platform is being built for amplification, not intelligence. It tells executives what to say and helps them be heard. ExecHQ tells executives what is actually true about their career trajectory. The two are complementary, not competitive..

ASPIRATIONS

Are there any brands you look at (not-necessarily in the same space--could be any industry) who you think does a good job with their overall brand and message? What about them do you respect? (to reiterate, this is brand--emotional connection--specific, not product or business model-specific)

Three brands that do something worth emulating, for specific reasons.

Headspace. Not the product — the brand decision they made early on, which was to take something that had historically required a teacher, a studio, and a level of expertise most people felt they did not have, and make it feel accessible, private, and genuinely useful without dumbing it down. They created a new category in a crowded wellness space by being honest about what the product actually is and not pretending it is more than that. The tone of voice — calm, specific, not preachy — is what ExecHQ should aspire to in its coaching and advisory layers.

Notion. Not the product — the way they positioned themselves against an established category by making the user feel intelligent rather than managed. Notion never tells you what to do with it. It gives you a genuinely powerful resource and trusts you to use it well. That trust is the brand. ExecHQ should have that same quality — the platform respects the intelligence of the person using it and never condescends.

The Athletic. What they understood that nobody else in sports media had figured out is that a serious audience for serious content will pay for something that respects their intelligence. Deep, specific, expert reporting for people who genuinely care about the subject. The brand is built on treating the audience as sophisticated rather than as a metric to maximize. ExecHQ's Daily Intelligence Briefing and its entire intelligence layer should aspire to that register — curated specifically, written for someone who is serious about their career, never dumbed down.

Pinterest. Pinterest understood that their value is in private thinking, not public sharing. Pinterest gives users a private space to think about what they want, before they know how to articulate it, without anyone watching. The boards that matter most to people are often the ones they never make public. The act of saving something to Pinterest is a private act of clarifying desire — you are not telling anyone anything, you are telling yourself something.

That insight is precisely the insight ExecHQ is built on. The executive who uses ExecHQ to honestly assess whether they are on the right path, or to quietly explore whether they are ready to build something new, is doing exactly what a Pinterest user does when they build a private board. They are thinking clearly about what they want in a space that belongs entirely to them.

Pinterest also built around aspiration without judgment. You are building a picture of your own life. The platform respected the fact that aspiration is personal and private before it is ever public. ExecHQ's Growth Engine, Spark, and Venture Readiness Assessment operate in exactly this way — helping the executive build a picture of their own career, not measuring them against someone else's.

Another parallel is that Pinterest users became deeply loyal because the platform was doing something genuinely useful that nothing else was doing. ExecHQ has the same characteristic. The first time an executive sees their actual signal profile benchmarked against their aspired role, or receives a Growth Advisor recommendation that is specific to their situation, or asks

Confidant a question they could not ask anyone else — that is the Pinterest moment. Everything before it is setup. Everything after it is loyalty.

VISUAL AESTHETIC

What three words describe your desired visual style? (e.g., bold and modern, classic and elegant, clean and minimalist)

What colors do you want associated with your brand?

Three words: **precise, inviting, premium.**

Precise because everything the platform does is specific — the visual language should communicate that specificity rather than feeling vague or aspirational in a generic way. Clean lines, deliberate typography, no decorative elements that do not carry meaning. The person using ExecHQ at 11pm to ask Confidant a difficult question should feel like they are in a space that belongs entirely to them.

Safe because the user can exhale here. This is a space where they can be honest and can stay for as long as they need or want. They can navigate freely and always come back to where they started or to a specific idea, signal, article or feature.

Premium because the audience is sophisticated and evaluates credibility partly on visual signals before they read a word. The platform should look like something that deserves to sit alongside the professional tools this audience uses every day — not like a startup prototype.

Colors: Navy (primary — trust, intelligence, depth), gold (accent — precision, value, the specific details that matter), and a muted slate blue (secondary — the private, calm register of the experience) are the colors embedded in every document we have built. But I'm open to suggested alternatives.

OTHER HELPFUL INFORMATION (NON-BRAND SPECIFIC)

What is the vision for your business by the end of years 1, 2, 3. How many product offerings, how many users, etc (again this can be high level).

Can you give us a sense of team size at launch and how you expect it to grow over the next 2 years--general positions and department sizes are fine)

End of Year 1 (end of 2027): ExecHQ is live at mass market scale. Deloitte partnership fully operational with active enterprise deployments across at least 10 to 15 partner organizations, collectively covering 2,000 to 5,000 users. Consumer subscriptions growing organically from

Deloitte network effects and partnership announcement press. Confidant (the feature) live and driving premium EmergeHQ in active development.

End of Year 2 (end of 2028): ExecHQ is an established platform with a meaningful user base — target 100,000 to 300,000 individual users across free and premium tiers, 30 to 50 enterprise deployments. The Executive Presence Intelligence Report launching as a standalone intelligence product sold to CHROs and talent organizations. EmergeHQ live.. SportHQ and CreateHQ in development.

End of Year 3 (end of 2029): The ConfidantHQ engine powers at least four live platforms — ExecHQ, EmergeHQ, SportHQ and CreateHQ. The platform family has enough cross-platform users to begin genuine ecosystem thinking. ExecHQ alone has 200,000 to 500,000 users. The Confidant feature is a named, recognized premium product across all platforms. The dataset is the most comprehensive longitudinal executive career intelligence dataset in existence and is beginning to generate independent research and licensing revenue.

TEAM SIZE AND STRUCTURE

At launch (Q4 2026): Eric as founder driving product, partnership, and strategy. Dom&Tom / Charming Robot handling the full technical build.. One or two advisory board members providing strategic counsel. No full-time hires beyond the founder at this stage — the Deloitte partnership funds the build and the development agency provides execution capacity.

Year 1 (2027): First full-time hires following mass market launch and early revenue. Priority order: Head of Product (to collaborate with Dom&Tom / Charming Robot & own the roadmap), Head of Enterprise Sales (to drive the CHRO and talent leadership conversations Deloitte's network opens), and a Content and Intelligence Lead (to own the Daily Briefing quality, the coaching prompt architecture, and the editorial voice). Total team of four to six including founder by end of Year 1. Dom&Tom / Charming Robot relationship continues for ongoing build work.

Year 2 (2028): Team grows to six to twelve as revenue supports it. Product development relationship continues with Dom&Tom / Charming Robot. Enterprise sales team expands to three to four people covering different industry verticals. A dedicated data and intelligence function begins as the dataset reaches a size where it becomes a commercial product. Marketing and brand hires become necessary as consumer growth becomes a primary priority alongside enterprise. A platform operations function to support the EmergeHQ launch and the development of the second vertical platform.

Additional Platform Features + Structure for Consideration (following group call on 9/11)

The ExecHQ Toolbox

Tools / resources / functions that produce something tangible — an asset, a plan, a brief, a decision, a piece of content — that moves a specific signal in a specific direction. The Toolbox is what converts the platform's intelligence into action, and action into momentum.

The distinction between the intelligence layer (Growth Index, Growth Advisor, Why Now, Confidant) and the toolbox layer (Content Builder, Situation Brief, Decision Framework, Signal Sprint) is distinct: the intelligence layer tells the user what is true. The toolbox layer helps them do something about it. Together they make ExecHQ feel genuinely indispensable rather than merely informative.

- The Signal Sprint Planner

When the Growth Index identifies that a specific signal is the user's most important gap — speaking, for example — the platform builds a 30-day Sprint Plan specifically for that signal. Not a generic action list but a specific, sequenced, deadline-driven plan: the three conferences to submit to this month, the two podcasts to pitch this week, the LinkedIn article to publish on a topic that builds speaking credibility, the one event to attend where program chairs are making selection decisions. A private action plan the user executes outside the platform and tracks back through signal updates. The Sprint Planner turns the intelligence layer into a tactical tool — bridging the gap between knowing the gap and closing it.

- The Interview Intelligence Builder

For executives in active consideration for a new role — internal or external — the platform builds a private Interview Intelligence Brief: what the user's signal profile says about their fit for this specific role, the three to five most compelling points they should make about their background, the gaps between their current profile and the role's likely requirements, and the questions they should be prepared to answer. Calibrated to the specific role and organization if the user provides that context. This is the tool that makes Confidant and the Growth Advisor feel immediately actionable in a high-stakes moment rather than generally useful over time.

- The Weekly Build Plan

Rather than just surfacing a weekly priority through the Weekly Pulse, the platform builds a structured Weekly Build Plan — a private, specific schedule for the week's career-building activities. Monday: draft the podcast pitch for these two shows. Wednesday: write 300 words of the LinkedIn article on this topic. Friday: send the speaking abstract to this conference. Fifteen minutes total. Specific, sequenced, and calibrated to the signals that most need to move. The user checks off items as they complete them and the platform tracks the impact on their signals over

time. This turns ExecHQ from a resource the user visits into a resource that is structurally embedded in their week.

- The Thought Leadership Builder

The user brings a topic, a perspective, or an observation from their industry. The platform asks three questions: what is the specific point of view you want to stake out, who is the audience you are trying to reach, and what outcome do you want this piece to produce for your career. From those answers it builds a structured thought leadership piece — not a generic article but a specific argument, with a clear position, evidence drawn from the user's signal profile and industry context, and a call to action calibrated to the user's aspired role. The user edits, refines, and decides whether and where to publish. The platform never sees it again unless the user chooses to track the outcome through Content Performance Intelligence.

- The Executive Bio Builder

Every executive needs multiple versions of their professional bio — a 50-100 word version for conference programs or press materials, a LinkedIn summary, a speaking bureau profile. Most executives either have one version they use everywhere inappropriately or spend significant time and money getting these written. The platform knows the user's full signal profile, their aspired role, their career history, and their standout quality. It can produce every version of their bio simultaneously, calibrated to the specific context, and update them automatically when the user's signals or goals change. This is a tool the user returns to every time they need to present themselves professionally.

- The Situation Brief

Before an important meeting — a board presentation, a job interview, a negotiation, a performance review — the user tells the platform what the situation is and what they want to accomplish. The platform produces a one-page Situation Brief: the context, the key points to make, the likely questions and how to address them, the signals from the user's profile that are most relevant to reference, and the one thing they most need to communicate in this specific situation. Private, specific, and deleted after use if the user chooses. This is the tool that makes the platform feel genuinely essential in a way that no other career resource currently provides — it is there for the specific moment, not just the general journey.

- The Career Narrative Builder

Every executive has a career story — the through-line that connects what they have done to where they are going. Most of them cannot articulate it clearly or consistently. The platform builds a Career Narrative from the user's full profile: a three to five sentence professional story that explains who they are, what they have built, and where they are going, told in a way that is specific, memorable, and calibrated to their aspired role. Multiple versions for different contexts — the networking conversation, the interview, the speaking introduction, the LinkedIn headline.

Updated automatically as the user's goals and signals evolve. This is the tool that gives the executive the words for the thing they have been trying to say about themselves for years.

- **The Decision Framework**

When an executive is facing a major career decision — whether to take a new role, whether to leave their current organization, whether to launch something, etc. — the platform walks them through a structured private decision framework. Not telling them what to do. Building the clearest possible picture of the decision in front of them: what the signals say about their readiness, what the opportunity cost is of each path, what the platform knows about their stated values and goals that is relevant, and what the one question is that they most need to answer before deciding. The output is a private Decision Brief the user keeps. Confidant is the natural companion for this — the framework builds the structure and Confidant handles the personal dimension.

- **The Reference Prep Builder**

When an executive is being considered for a senior role, a speaking opportunity, etc. they are often asked to provide references or to prepare reference givers. The platform builds a Reference Prep document — a one-page brief the user can share with their reference that covers the specific role being pursued, the key points the reference should emphasize, the signals from the user's profile that are most relevant, and the context the reference needs to make the strongest possible case. This is a tool every senior professional needs and nobody currently provides with this level of personalization.

Alternative Solution to the Growth Index: The Executive Presence Audit

The Growth Index tries to answer the question "where do you stand?" with a number. The problem is that the number requires an external reference point to be meaningful, and that reference point is either arbitrary or unavailable until the platform has a robust dataset.

In its place, an 'Executive Presence Audit' answers the same question differently. Instead of 'your score', it articulates what is actually happening in your career presence — what are you building, what have you completed, what is moving, and what does the picture honestly show. That question can be answered specifically and defensibly from day one, with no external cohort required, because it is grounded entirely in the user's own behavior and trajectory rather than in a comparison to others.

The Audit also captures what actually produces career advancement. Career momentum is not produced by having a LinkedIn score of 68. It is produced by publishing consistently, engaging with specific opportunities, completing the Toolbox tasks that build presence in the right channels, showing up at the right events over time. All of those things are observable, trackable, and defensible — and none of them require a numerical score to communicate clearly.

What the Audit measures

Signal activity — not a score, but a picture. In the past 30 days the user published two LinkedIn articles, submitted one speaking abstract, appeared on one podcast, and had three press mentions. These are facts, not estimates. They are either true or they are not. The platform tracks them through user updates and third-party integrations if available. The Audit presents them as a picture of what is actually happening rather than converting them into an obscure number.

Toolbox completion — Did the user complete the tasks in their *Weekly Build Plan* this week? Did they finish the *Thought Leadership* piece they started? Did they send the podcast pitches the *Signal Sprint Planner* identified? These are binary — done or not done — and they connect directly to observable career outcomes. An executive who consistently completes their Weekly or Bi-weekly Build Plan is building deliberately. An executive who opens the platform on occasion to read their briefing is not. The Audit distinguishes between those two users honestly and specifically.

Momentum indicators — not a score but a trend. Is the user's LinkedIn engagement increasing, flat, or declining over the past 90 days? Have they appeared at more or fewer speaking events this quarter than last? Are they generating more or fewer press mentions? These directional observations are defensible because they are grounded in the user's own trajectory rather than in a comparison to others. The user cannot argue with their own trend line.

Confidant and Growth Advisor engagement — how often is the user bringing real questions to the platform and engaging deeply with the guidance? The frequency and depth of that engagement is a meaningful signal of intentionality that no score can capture but a qualitative audit can.

Gap picture — the one place where external reference points matter, presented honestly. Rather than assigning a number based on a benchmark, the Audit presents a qualitative picture: your published content activity is strong and consistent. Your press presence is lighter than executives in your field who are being considered for roles at your aspired level typically demonstrate. Not a score. A specific, honest, qualitative observation grounded in the best available research about what matters at that career level — with the source of that research stated transparently.

What the Audit produces that the Growth Index cannot

The Growth Index produces a number. The user looks at it, notes whether it went up or down, and moves on. It does not tell them what to do differently. It does not explain what produced the change. It does not connect to the specific actions they took or did not take. It is an output with no clear input-output relationship the user can act on.

The Audit produces a narrative. It tells the user what they have been building, how consistently they have been building it, where the most important gaps in their approach are, and what the specific next actions are that would most meaningfully change the picture. Every observation in the Audit is connected to something the user did or did not do — which means every observation is actionable in a way that a number never is.

The Audit also produces a document the user keeps. Unlike a score that is simply updated the next time it is calculated, the Audit creates a quarterly record of what the user was building, what they accomplished, and what they were thinking about at that specific moment in their career. That record becomes a private career journal that is maintained over time. Ten Audit reports over two and a half years tell a story about deliberate career building that no score history can offer.

Audit Features:

1)The Signal Picture — a qualitative visual representation of what is happening across the six signal dimensions. Not scored. Not compared to others. A factual picture of the user's activity in each channel over the past 30 and 90 days, presented alongside a qualitative observation about what that activity level suggests for their aspired role. Updated monthly.

2)The Momentum Indicator — a simple, behavioral measure of how consistently and deliberately the user is engaging with the platform. Advances through completed Toolbox tasks, Confidant sessions, Growth Engine opportunity engagement, and briefing engagement. Cannot be gamed. Does not compare to others. It measures behavior, not outcome, and is entirely transparent.

3)The Quarterly Report. A structured qualitative assessment that brings together the Signal Picture, the Momentum Indicator, the Toolbox completion record, and the Confidant conversation themes into an honest narrative about how deliberately the user is building and where the most important gaps in their approach are. Produced in a structured format with specific, actionable observations. No score. No comparison to others. A private document the user keeps and returns to.

The one thing worth preserving from the Growth Index

The six signal categories — LinkedIn, press, speaking, podcast, published content, and AI discoverability — are the right framework for thinking about executive career presence. That framework is defensible and should be preserved in the Audit structure. What gets removed is the conversion of activity in those categories into a numerical score. The categories stay. The numbers go.

The company + brand architecture

The Exec Desk, LLC. — legal parent.

ConfidantHQ — the engine. Powers every platform. Named in sub-branding as "powered by ConfidantHQ."

ExecHQ — the platform for executives. If the trademark does not clear, the replacement is one of the candidates being evaluated — *ExecDeskHQ*, *ExecSpaceHQ* or *TheDeskHQ*.

EmergeHQ, SportHQ, CreateHQ — each powered by ConfidantHQ. Each their own platform.

Confidant — the premium private advisory feature within ExecHQ and eventually within every ConfidantHQ-powered platform.
